

# Platinum Feline Essential

To help your kitten enjoy a happy, healthy life,  
this preventive care visit includes the following:

## **Chemistry profile and complete blood count (CBC)**

A baseline blood chemistry profile, including SDMA, provides information about your cat's kidneys, liver, and pancreas, as well as other functions of the body, such as blood sugar and hydration. A CBC can identify infection, inflammation, and anemia.

## **Fecal test**

This test checks for intestinal parasites that may live in your cat's gastrointestinal tract. Since they are usually hidden from view, the only way to detect and identify most intestinal parasites is by doing a fecal test.

## **Infectious disease screening**

This screening indicates whether your cat has been infected with feline leukemia virus (FeLV) and feline immunodeficiency virus (FIV)—the most common infectious diseases in cats. It also indicates exposure to heartworm.

## **Radiographs**

Preventive radiography imaging exams are designed to detect cancer and noncancerous health conditions in their early stages, when diseases are more treatable and curable.

## **Blood Pressure**

Your pet can suffer from hypertension (high blood pressure) just like a human can.

## **Ultrasound**

Ultrasonounds are a safe, non-invasive, and painless procedure done to aid in making a proper diagnosis of a disease-causing illness or other condition.

**Regular total cost     \$975.59**

**Discounted preventive care bundle cost     \$731.70**
